ABOUT THE ICA AND ICB

e-ICB

<http://ilchess.org/e.htm>

Illinois Chess Bulletin e-ICB

Published online six times per year.
Copyright 2006 Illinois Chess Association.

Next Deadline: April 15, 2008.

Submission Guidelines

Send all e-ICB submissions to:
Pete Karagianis
ICBEditor@gmail.com

Only electronic submissions will be accepted. The preferred format is .cbh or .pgn file for games, .doc file for articles.

ALL SUBMISSIONS including advertisements should have the subject "ICB Submission" in the e-mail.

Pictures Wanted!

Have a digital camera? Take it to your next tournament and send the photos to the ICB! A picture says a thousand words. Preferred format for all digital images is .jpg, but others are accepted.

Editorial Staff

Editor in Chief: Pete Karagianis

Games Editor: IM Angelo Young

Advertising Rates

Contact the ICA President at: clmerli@insightbb.net for e-ICB advertising rates. There is a \$20 design-charge for all advertisements that are not camera-ready or pre-made in .jpg format. Allow additional time before deadline for design and placement. Payment must accompany the ad.

Membership Information

The Illinois Chess Bulletin (ICB) is published by the Illinois Chess Association (ICA). ICA membership includes a subscription to the ICB. Memberships marked 1st receive their magazines first class. Memberships marked "P" also received a plaque. Affiliates receive discounted advertising rates, event advertising on the ICA website, and the right to run tour events.

Further information on membership rates and benefits can be found at:

FROM THE EDITOR'S DESK

e-ICB

<http://ilchess.org/e.htm>

by **Pete Karagianis**

A big "Thank you" to scholastic chess! I am very pleased to have a detailed report

(from our esteemed president, Dr. Chris Merli) as well as a lovely collection of pictures submitted by Mike Zacate and Betsy Dynako, all from the IHSA State team tournament. I think you'll agree from the two panorama shots of the room contained herein, it's nice to see so many young players partaking in the game we all enjoy so much. It certainly gives me great hope for the future of the sport (wow, do I sound old?) Congratulations to Lincolnshire for winning the IHSA State Team Chess Championship, and congratulations to all the participants for a well-fought (and well-attended!) event.

Also, I am glad to see the overall number of games in the magazine is going up. One of the largest complaints I received regarding my tenure as ICB editor was that we needed a larger volume of games per issue. In this bi-monthly edition, you will find three fully annotated (including a 130-mover) games from IM Angelo Young, several selected scores from the ICCA Individual Championships, three yellowed scoresheets from the long-lost files of Life Master Len Weber, a continued investigation into playing 1. d4 with aggression, by Henry Getz,

Ricardo Szmetan Wins December Tournament

-David Long

On December 8, the Springfield Chess Club organized what is almost certainly the last tournament to be held at the Signature Inn. 30 chess players plus one houseman participated, continuing the very encouraging upward trend in participation! Ricardo Szmetan, of Champaign, won all four of his games and took first place in the tournament. Two players tied for second place and first in Class A-B. They were Matt Cremeens, of Springfield, and Kevin Cao, of Chesterfield, Mo., each with 3 points.

Turnout in the A-B class was so exceptional that we had enough revenue to create a second place prize in that division, the first time since 2001 that that has happened here. This prize ended up being split eight ways, between Brian Thomas, of Decatur; Derek Sparks, of Middletown; Bruce Michel, of Stonington; Troy Krimmiger, of Collinsville; Dennis Bourgerie, of Normal; Wil-

liam Tong, of St. Louis; and Tobias Simpson and Robert Naiman, both of Champaign. Each scored 2½ points.

2½ points was enough for half of the Class C-D prize. William Kerns, of Franklin, and Cameron Heino, of Champaign, divided it between them. Shelly Rode, of St. Louis, took the Class E prize with 2 points, and Michael Hines, of Champaign, scored 1½ points and won the unrated prize.

For the second straight tournament, the prize fund was raised from 75% of advertised (the minimum required by turnout) to 90%, and after including the second A-B prize and rounding up the ones that were shared, the total payout was actually above the \$300 advertised, the first time in over six years that we have been able to do that!

Special thanks to Tobias Simpson, who brought a contingent of eight (including himself) from the Champaign-Urbana area. We hope they, and everyone else who came in from out of town, made it home safely in the ice and sleet that night!

and some random nonsensical analysis by yours truly. I do hope you all enjoy reading this issue as much as I enjoyed putting it together (I particularly like the cover, for some reason...) and I look forward to seeing more of your contributions next time! It does seem that along with the increased games content, I have also been receiving a larger volume of submissions, but I can never have enough! So please, take that as a call to action, get in front of

your computer, and bang out some material, analysis, or just plain fun.

ICA PRESIDENT
CHRIS MERLI

REPORTS ON THE
2008 IHSA
CHAMPIONSHIPS

The 2008 IHSA State High School Chess Championships were held at the Peoria

Civic Center on February 8 and 9. Over 1200 players and coaches representing 118 teams met in the newly opened ballroom at the Civic Center. This is an excellent site for this event. The area is large and completely carpeted and supplies plenty of skittles areas for the players between rounds. Coaches enjoyed a great view of the city from the large windows in the coach's room. Teams meet in a 8 player match according to rating with the value for a win weighted according to the board. A team winning more than half of the 68 points wins the match.

Each year the teams are arranged according to the recommendations of the seeding committee that meets two weeks before the state tournament. This year the seeding committee had selected the powerful Niles North team from Skokie as the top seed. This team is led by two experts Ilan Meerovich and Ben Rothchild. However lurking below were several teams looking to knock off Niles.

The first round went as expected for the top teams but trouble started in the second round when number 8 seed Chicago Saint Patrick was upset by Glenbard West from Glen Ellyn. In round three the upsets continued as 4th seeded Barrington was dropped by Cary Grove. Typically the real battles begin in round 4 as the top teams begin to meet. With better than 6 hours of chess behind them the top teams were now facing two hours of all out war in the fading light of evening. On first board Niles North found themselves in trouble against Normal University High School. In the seeding meeting I had predicted that Normal would upset one of the top teams because of their depth but in this match the top two boards from Normal were the big story. Senior Eric Meier and Junior Sean Comerford out dueled the number 1 and 2 from Niles to lead the team to a decisive 48.5 - 19.5 win. This stunning upset threw the entire tournament wide open. Meanwhile 3rd seed Lane Tech from Chicago ran into a battle hardened New Trier from Winnetka. This team plays in the always tough North Suburban League that placed 6 of its teams in the top 20. New Trier lost the top two boards but swept the bottom 6 for a 45 - 23 win. 6th seed Whitney Young from Chicago was the next victim of the Cary Grove team when Cary nailed down a 43-25 win. Finally on board two a pair of 9 time state champions, University High School in Urbana and Evanston Township were each looking to become the first team to ever win 10 state titles. This time University High was the winner eliminating Evanston from the perfect score group. Now only 5 teams remained with perfect scores. Two of them were from the downstate East Central Illinois Chess League, University High School Normal and University High School Urbana. The combined enrollment in these two schools is less than a 900. By comparison the next smallest undefeated school Cary Grove has over 1900 students.

In round 5 University High Urbana faced Cary and Lincolnshire Stevenson played New Trier while Normal played down into the next score group against Chicago Lane. Cary Grove, which has been getting coaching from GM Yuri Schulman looked to be in trouble against second seed University High Urbana. Coach Peter Spizziri even commented to me that it looked like it was all over. But someone forgot to tell the Cary Grove team and they battled back in several games to scrape out a narrow 36-32 win. Meanwhile Lincolnshire stopped New Trier and Lane ended Normal's perfect run. Only two teams remained in the undefeated ranks going into round 6. The upset minded Cary team which had already faced teams 4, 6, 2 now faced team 5. However the tough road had finally wore them down and they were dominated 58-10 by Lincolnshire. Meanwhile the chase group was warming up for a chance to drag Lincolnshire back to the pack. University High Urbana, perhaps deflated by the round 5 loss was upset by Hindsdale Central and ended their title hopes. Now the chase group had to hope one of their members could take down the last perfect score. Because of the tiebreaker situation each team had to hope they could defeat Lincolnshire and get the extra tiebreakers. Barrington was selected for the task due to color alternation. Lincolnshire went into the match knowing that a win or tie would make them the clear state champions. On board 1 Zach Kasiurack got Barrington off to a good start with a win but his was the only win for Barrington as Lincolnshire won 52.5-15.5.

The final standings had Lincolnshire as the new State Champions. Whitney Young recovered from their 4th round loss to finish in second and New Trier moved up from 10th seed to take third place. The Illinois Chess Coaches Association presented Trophies to the remaining 6-1 teams Niles North, Mudelein Carmel and Chicago St. Patrick. In addition the ICCA also presented awards to schools by enrollment. The 6A award went to Barrington High school. Glenbrook South took home the top 5A prize. In 4A Glenbard West caught up with the weary Cary which had faced 5 of the top 6 seeded teams. Among the 3A schools Illinois Match and Science Academy took first place. Meanwhile small schools Normal University (2A) and Urbana University (1A) took home the top honors in their classes.

A BLOODY NOSE

A BLOODY NOSE FROM GROUND ZERO TO MASTER

A story of a chess journey from absolute beginner at chess to National Master. Second in a series.

By NM Len J. Weber

The time: About 7PM.

Date: January 11th, 1983.

Location: Thornridge High School, Dolton, Illinois.

Event: Non-conference match between Oak Forest High School, and Thornridge High School.

No one at Thornridge remembered the last time we'd had a winning season in chess. I'd been told last year we were something like, 4-8, if my memory serves me. Mike Zaccate was the Secretary Statistician of SICA back then, and if I know anything about him, he probably still has all the records. Am I right, Mike?

Oak Forest was not known to be a powerhouse in chess. The SICA teams spoken of in awe inspiring tones were first and foremost Lincoln-Way, which was said to have 70 players on their roster. Bradley-Bourbonnais, probably was second, and Stagg was said to be good. In our division, the teams to beat were supposedly TF North and Thornwood (under the epic coach George Beaver.)

But we were optimistic and confident. We had Paul Moore (1460~) on board 1. Jack Simunic (1350~)

on 2nd. Matt Bolton (1450~) on 3rd. My nemesis Bill Herman (unr) on 4th. And I was on 5th. My friend "Tim" was on 8th. We had practiced and studied over the holiday break, anticipating the start of the season.

Oak Forest at Thornridge
5th Board
January 11th 2003

Bill Helmold – L. Weber

1. Nf3 Nf6

What's this? I'd seen it a couple times, and not knowing what to do, I'd just copy him. Studying openings was more fun at the beginner level because we only felt we needed to learn something a couple moves deep! Only the top boards seemed to be really into them. Paul Moore, on board one, was always talking about "theory", and we knew he studied "ECO", and had "Informant", which was some mysterious Eastern bloc chess books in which were contained the latest and most current brilliant (usually Soviet) chess analysis. Paul took notation in algebraic (oooooh), and took a long time making his moves, studying the board intently. Us weaker guys moved fairly quickly by comparison.

I should mention that THIS was my first "real" tournament game. It was not USCF rated, but it was the first game played against a stranger, as part of some larger competition. I was extremely nervous.

2. Nc3 e6

Ok, I wasn't going to copy him for long. By now I had a pretty good

NM Len J. Weber

idea about developing your pieces and castling, so I was going to do that as quickly as possible.

3. d3 d5 4. Bg5 h6

I guess I was still in that mindset of trying to attack things, rather than just develop with ...Be7

5. Bf4 Be7 6. Nb5 Na6

I'd learned enough about forks and cheap stuff by now that something that would have worked on me a couple months earlier, like allowing Nxc7+, would not happen now.

7. Ne5 Bd7

Though he is making forward aggressive moves, White has moved the knights twice each now, against which I have developed a new piece. He also has no center presence, and it not ready to castle, while Black is. White is already behind in development by about 2 moves. Can Black capitalize on this?

8. Nxd7 Qxd7

Now Black has 4 pieces developed, is ready to castle either way, has a presence in the center, compared with two White pieces developed

and still a move or two to castle. Further, Black stands to gain a further developing move because White must either move or defend his Nb5. Interesting, my recollection of this game is not so clearcut, I remember "the material was even" and that was about all I would have thought about assessing the position back then.

9. Nc3 O-O

10. e4 ...

Ok, crucial moment. With a heavy development lead, Black should find a way to continue to develop, avoid trades, break the game open, ideally before White castles, and use the heavier piece availability to create threats, cause weaknesses, try to find a way to convert the temporary time advantage to something concrete and permanent. (For instance a grievous positional weakness or a win of material.) Let's see how Black handles this.

10. ... dxe4

Good.

11. dxe4 Qxd1+

NO!!!! Why go through all that trouble just to let him trade off the off-fending developed pieces! Because you "hope" he'll take back with the knight and you'll win e4? THINK. How about, instead, 11. ... Qc6. Then if, say, 12. Bb5 Qb6 and

White must be very careful not to lose material. Black is threatening to further develop with ...Rd8, or to win a pawn with ...Nxe4.

12. Rxd1 ...

Now White is basically out of danger.

12. ... Rad8

13. Be2 Bb4

White's seemingly tame 13th move is probably actually kind of smart. If he goes for the pawn with 13. Bxa6 bxa6 14. Bxc7, he will have issues of his own after 14. ... Rc8 and Black hitting the c3 Knight, trying to double White's pawns on the now open c file.

14. O-O ...

Now both guys have pieces attacking each other and possible pawns hanging. Castling is not so critical anymore because the Queens are off. Maybe White should just have played f3 to protect e4.

14. ... Bxc3

15. bxc3 Nxe4

A win of a pawn, threatening Nxc3, but there's still a lot of pawns flying around loose for both sides.

16. Rd3 Rxd3

17. Bxd3 Nxc3

Great, up 2 pawns, I didn't understand at the time that those Bishops he has can really wreak havoc against 2 Knights on an open board.

18. Ra1 c6

19. Bxa6 bxa6

I guess HE didn't understand what he should do with those Bishops, either!

20. Be3 Rd8

21. a3 Na2

Hey, I was excited, hoping he'd go for Rxa2 and I back rank him.

22. g3! Nc3

Wow, that was productive.

23. Bxa7 g6?

I'd sure like to know how he was going to answer ...Rd2!

24. Bb6 Rd1+?

ARGH, Rd2 was still good.

25. Rxd1 Nxd1

26. h4? ...

Better was Bd4! Because then the Knight is trapped on d1, and to avoid White's King just walking over and winning it, Black would have to jettison a pawn with ...c5 in order to get the Bishop to release it's grip.

26. ... f5?

Still allows Bd4

27. Kg2? h5?

28. Bd8? e5

Is someone going to try and get their King into the center any time soon?

29. Kf3 Kf7

30. Bg5 e4+

31. Ke2 Nc3+

32. Ke3 Nd5+

33. Ke2? ...

Kd4! Getting to c5 immediately! Now the White K is trapped back there. Black should now get his King to the Queenside. Instead of taking advantage of the brilliantly placed Knight, Black instead feels a trade would be good, since he's up

a pawn, right?

- 33. ... Nf6?
- 34. Ke3 Ng4+
- 35. Ke2 Ke6
- 36. f3 exf3
- 37. Kxf3 Ke5
- 38. c3 Nf6
- 39. a4 Nh7?

So desperate for that trade, when in fact it is not necessary.

40. Bf4+ Kf6?

Since all Black's pawns are on light squares, there's no need to feel defensive about them, Kd6 is better. I bet my nerves were racing at this point.

- 41. c4 g5
- 42. hxg5 Nxf5
- 43. Kg2 Ke6???????

And there it is. As soon as I made the move, I realized what I had done. I'm sure I visibly sank into my chair.

44. Bxg5 Ke5

But I must play on for my team. I felt I was dead lost and played like it. Truth is, White must be careful here, Black's King is better and none of Black's pawns are targets. The flipside is that White's pawns are targets only as long as they are on light squares.

45. Kf3!? ...

He's already making potential mistakes. Be3 would have locked out the Black King.

- 45. ... Kd4
- 46. Kf4 Kxc4
- 47. Kxf5 Kb3?
- 48. Ke5? c5

As long as he was going to do that instead of going after the h5 pawn and just queening... better would have been 47. ... Kb4 48. Ke5 Kxa4 49. Kd6 Kb5 and this is not so simple any more...

- 49. Kd5 c4
- 50. a5 c3
- 51. Kc5 c2
- 52. Kb6 Ka4
- 53. Kxa6
- 1-0

Our team won the match, despite my losing, and so it was made better somehow. But I was really let down, not so much because I lost, but because of HOW I lost. Back then, as now, I have always had the attitude that losing was, well, as "okay" as it could be if the guy just flat out beats you, you gave it your best, and he just did it better. But when you just GIVE the game away, and the opponent's play required nothing better than the basics to win, well, that's not competitive. I always felt that not only dishonored yourself, but also dishonored your opponent, to whom you did not give your very best effort. But it was also a disappointment to me, because to throw away a game like that was irresponsible. Fortunately the team won, and so my failure did not cause too much damage.

Yes, that was a lot of pressure for a beginner to put on himself in his first tournament game. But re-

member, I didn't start when I was 5 years old. I was 16 when this game was played. I was excited to be on this team, and I believed in my teammates. Over the years I would have to say that one of the ways you can tell who is going to advance or at least advance more quickly, is by their attitudes. Happy go lucky people play happy go lucky chess. And that's fine. Many of them play very well. But it's those serious ones you have to keep your eye on. They might not be good right now, but as a rule, time invested into chess DOES show results. Give them a year or two. See what happens.

It was during this time period that the upper boards talked of "H-F". Oh, are you going to "H-F?" Eventually, they started inviting us lower boards to go with them. "H-F" was the legendary Homewood-Flossmoor Chess Club. It was there that our top boards bantered with their conference rivals. There was Jeff Olejnik, board 1 of TF North. Joaquim Godfrey, board 1 of Thornwood. I learned with amazement that there were even stronger high school aged players at H-F, as well as many adult masters.

On one of my first visits, driven along with others by Paul, our 1st board, I picked up this club newsletter. It was called "The Open File", edited by Newton Berry. I still have this newsletter, in my hand, as I write this article. Here is the headline article (reprinted from the Vol.5, No.2, Sept.-Oct.-Nov.-Dec. 1982 Open File).

TENNANT NEW CLUB CHAMPION

Dr. Steven Tennant is the 1982 champion of the Homewood-Flossmoor Park District Chess Club. Scoring 8-2 against a tough field that included the club's defending

titleholder William Harris, Tennant grabbed an early lead and easily outdistanced everyone. Steve lost only once in the 10-game double round robin – to Bob Bain, who also nicked him for a draw. Harris accounted for the other draw.

Big surprise of the invitational was Walter Brown, who finished strong at 6-4 for at least half of second place. With his second game against Peter Bereolos still to be decided, Harris could match Brown's mark with a victory.

Bain finished at 4.5-5.5, Bill Colias at 3-7, and Bereolos at 2.5-6.5 with one game still to make up.

It was at this club that we first got to see the dynamic duo from Indiana, Billy Colias and Peter Bereolos, both about my age, but both over 2100, in person for the first time. The Illinois wonder making appearances was Al Chow, a bit older than them, but streaking like a meteor through the Illinois chess scene, well over 2200. The Illinois answer to Colias and Bereolos was Adam Lief, we heard the name spoken of, but he wasn't from the south parts of the Chicago area, and we never saw him at the club.

The newsletter also mentioned various smaller events at the club, including a ladder tournament won by Brent Chromczak (whose name I knew of as a Thornridge alumni), and with one of our top boards, Jack Simunic, tying for second.

The reason this little history lesson is significant is because I looked at these guys like you newer folks may look at masters and experts right now. The point of it is because later on I would become rivals to some of these guys, like Steve Tennant, with whom I tussled for supremacy at the heir to the H-F club, Orland Park Chess Club, for several years.

Unfortunately I could not quite overtake Steve! I got to within 4 rating points at the height of the struggles but couldn't get past him, and could not win the club championship ahead of him. Who would have thought that in 1983?

My second tournament game was the very next week, against Al Crutcher of Shepard High School. I played Board 4, because Paul, our Board 1 was absent. Unfortunately (or fortunately!) this game score is illegible. I was unable to reproduce the game, but the point is I lost and lost badly. My confidence was getting a little shaken. Unfortunately, our team lost this match, if I recall correctly. After my second straight debacle, some of the players on boards below me were starting to grow restless, and they began to entertain thoughts of challenging me for my 5th Board. None developed at this time, so I engaged my friend Tim in a few training games.

One thing I learned early on is that a regular chess rival, against whom you could play matches, is invaluable for improvement. My records show I won this series 4.5-1.5. Then a game against Alan Pekny, the hungry Freshman on the board just below me, who was eyeing my place on the team...

**Thornridge H.H. Casual game
Alan Pekny (962) – L. Weber
January 24th 1983**

1. e4 c5
2. Nf3 d6

I had now solved my inability to do anything useful in those symmetrical double king pawn all knights out high school games by playing the Sicilian against e4 every game. What little I had learned about it came from a book at the library, the previously mentioned

Fischer-Spassky match book. Although I understood little of what was involved in the analysis, it still contained some useful information I could use against my under 1000 rated opponents...

3. d4 cxd4
4. Nxd4 Nf6
5. Nc3 a6

The Najdorf. I only understood in those days that ...a6 was useful in stopping a lot of the silliness that weak players (like myself) would try with Bishop checks and attempted Knight forks on b5.

6. Bg5 e6
7. f4 Be7
8. Qf3 Qc7
9. O-O-O Nbd7
10. g4 b5

Interestingly this is still all book. I'm a little surprised that either of us back then would have known that much.

11. Bxf6 Nxf6
12. g5 Nd7
13. f5 ...

White continues to play aggressively, which, I found even then, was a drawback of the Sicilians. Even guys who knew relatively little could often summon strong attacks against it. But I would have to conclude that Mr. Penky (962) had been doing some homework. Maybe he would again fall into some kind of fork, as was his reputation!

13. ... Ne5

As many of you Najdorf buffs probably know, Black taking that g5 pawn with check is not always a good idea. Basically all that does is leave another line open for White's superior development to exploit, and it also leaves a piece en prise

(the B on g5) for White to attack a move or so later. While I'm sure I didn't know the intricacies of this at the time, I must have had enough instinct to believe it was too dangerous.

Qf4? ...

This is a bad place for the Queen, it invites things like the text. Better Qh3 or Qh5.

14. ... d5?!

The ?! because it threatens to win the Q, but if White had seen the threat and been able to find a useful place to put the Q, the helping open the center when that was the last safe place for Black's King to hide was ill-advised.

15. exd5??? Nd3+ 0-1

Two days later, our first board Paul gave the lower boards a simul.

**Simultaneous Display
Thornridge High School
January 26th 1983**

Paul Moore (1465) – L. Weber

1. e4 e5 (?)

I remember thinking that Paul, the great student of all these Russian chess books, would know the Sicilian quite deeply. So what do I do? I play an opening that I know even less about, the Philidor. Does that make sense? Folks, if you are studying something and it's getting you relatively good games, don't go away from that out of fear your opponent knows more, and instead go into something you know even less about. Go into your strength, even if it is less strength than your opponent. The worst thing that can happen is you'll learn even MORE

about what you're studying. My first chance against our Board 1, and I play something totally alien.

**2. Nf3 d6
3. d4 exd4??**

This gets the blunder mark because the whole POINT of the Philidor is to retain a pawn on e5. This shows how little I knew about it, giving up the center on a whim.

**4. Nxd4 Nd7
5. Nc3 Be7
6. Bd3 ...**

I didn't realize it at the time, but even our resident demigod was only an "average" player back then. Of course, the Bishop has little scope here.

**6. ... Ngf6
7. O-O O-O
8. Bg5 Re8
9. Re1 Ne5?
10. f4 Nxd3
11. cxd3 Bg4
12. Qd2 h6
13. Bxf6 Bxf6
14. Nc2 c6**

This is turning out to be a decent game. White has central control, but Black has 2 Bishops. Black must be careful not to get the g4 Bishop hemmed in, but any obvious attempt to win it (such as f5, fol-

lowed by h3 then g4) would require a gross weakening of the Kingside. ...c6 of course stopped White's attempt to occupy d5.

15. h3 Bh5

I'm thinking it should have gone back to d7. A thing we all learn early is that Bishops to not have to be up close and personal to be effective, like a Knight does.

16. g4 ...

Very aggressive. Probably not sound because White will need to take a number of moves to get pieces over to the Kingside to support the attack and fill all those holes. Black's ability to use Bishops (and Queen) to attack weak points takes far fewer moves.

16. ... Bh4?

Apparently what I have NOT learned by this point is the relative value of pieces verse Rooks. White has some large holes, especially on dark squares at the moment. The idea of giving up BOTH those Bishops for that single Rook, even with the ruining of White's Pawns... well, I wouldn't do that today.

**17. gxh5 Bxe1
18. Rxe1 d5**

I think maybe Black should play Qh4 and try to pick up a pawn or two.

**19. e5 Qh4
20. Kh2 Qxh5
21. Qg2 Qf5
22. Qf3 Re6??
23. Re2? Rae8**

Of course, Nd4 would be nice.

**24. Nd4 Rxe5?
25. fxe5? Qxf3
26. Nxf3 f6**

27. exf6 Rxe2
28. Nxe2
1-0

What I remember coming away from this game was that while I was thumped pretty good, that Paul didn't seem so invincible. I expected his much vaunted opening expertise to crush me, or his heralded attacking prowess. Instead it was just like any other opponent up to that point. He was human.

We were all excited to be going to Fred Gruenberg's Put The Fun Back Into Chess on January 29th, of 1983, held at the Morgan Park Church, if my memory serves. We already discussed my first ever rated game in the article "A Quarter Century of Chess" in the Nov-Dec 2007 ICB. In round one I lost to Brett Howe (1195). In round two of that event, in my second rated game, I played Larry Lewis (unr).

L. Weber (unr) – Larry Lewis (unr)
Put The Fun Back Into Chess
Round 2, table 91

If my recollection is correct, neither of us had a clock, so we had to start the game without one. I think a TD may have brought one over to us later.

1. e4 d5
2. exd5 Qxd5
3. Nc3 Qd6
4. Bc4 Bf5
5. Nf3 Nf6
6. O-O e6
7. d4 Nc6
8. Re1 Be7
9. h3 O-O
10. Be3 Nb4
11. Bd3? ...

I remember that I was down from losing in round 1, and still having never actually won a real tourna-

ment game of any kind, I was playing a bit stiffly. Of course Bb3 is much better.

11. ... Bxd3
12. cxd3 c6
13. Ne4 Qc7

Of course he doesn't want to play Nxe4 dxe4 and un-double my pawns.

14. a3 Nbd5
15. Bg5 ...

I could have just left it on e3, because if he takes it, fxe3 and instead of isolated pawns on an open file, I'd have some protection.

15. ... Nxe4?

He should just get down to it and start doubling Rooks on the d file and go for those weak pawns.

16. Bxe7 Qxe7
17. dxe4 Nf4
18. d5? ...

Not really sure what the pretty N on f4 was supposed to do. White's attempt with d5 to eliminate that potentially weak pawn using the pin on the e file, while noble, was premature, as demonstrated by Black's intermezzo.

18. ... Rad8

19. Qd2 e5
20. Rad1 f6?

Maybe ... Rd6 was better here, doubling on the d file, and preventing the dangerous funny business to follow.

21. d6 Qe6
22. Qb4 b6
23. Re3? ...

Where is it going? Simply Qa4 looks difficult to answer.

23. ... f5
24. Ng4? ...

Completely unnecessary. If White was hoping for something on the a2-g8 diagonal, it won't happen because there's a Rook and a Queen protecting f7. Now this is just playing into Black's hands for Kingside play.

24. ... Qg6
25. h4? Qh5?

Boys and girls, you have to slow down and see what is going on. Today I tell my students, just stop and look at the board for a moment. You'll be amazed at what you can find. While this move LOOKS good, seeming to win the h pawn by attacking the Rook on d1, it is actually refuted by the Queen check on b3. Better was 25. ... h6. Where is the Knight going to go? If it moves, there's mate on g2. If White plays 26 g3, then ... hxg5 and if 27. gxf4 gxf4+ and the Rook falls.

26. Qb3+ Kh8
27. Nf3 Qg4
28. g3 Nh3+
29. Kg2 fxe4
30. Nxe5 Rxf2+
31. Kh1 Qf5
32. Nf7+ Qxf7
33. Qxf7 Rxf7

34. Kg2 Nf4+?

All very interesting, but Black could have tried to save the N with ...Nf2. Then if Rf1, he takes the d6 pawn and has a better ending. Frankly I admit I'm a little amazed that when I played Nf7+ I saw the N on h3 was trapped after the trades. I know this was true because there is a little (!) after Nf7+ in my writing on the original scoresheet. Interesting.

35. gxf4 Rxf4
36. Kg3

and the scoresheet becomes illegible, but somehow we both managed not to lose and the game shows drawn on move 64.

1/2-1/2

Finally, a non-loss! I wasn't thrilled about it though, a draw to me back then meant about the same as a tie in a football game. I didn't want a draw, I wanted to win!

After a third round loss against Ubald Vazquez, I was depressed and very tired. That game, my opponent's father set up the clock. I remember when it was ticking, it seemed to be ticking MUCH faster when it was my move than when it was his. I mean it was so noticeable, it was not my imagination. Real nice. the games lasted

52 moves, and ended up in an end-game with multiple mistakes made by both sides, but I suppose it is true that the winner is always the one who blunders second to last.

There was still one more round to go, but Paul, our ride, thankfully said he was withdrawing, and thus some of us other guys had to do so as well, unless we wanted to walk home!

Paul had a mediocre result, although our boards 2 (Jack) and 3 (Matt), did pretty well. Jack went one win and 3 draws against 1500 rated opposition, which was certain to help out his 1360 rating. It was shortly after this tournament that it was agreed that Jack would be playing 1st Board, and Paul would play board 2.

I later learned that based on my opponents' performances, my first provisional USCF rating would be about 760.

So five tournament games and only a draw with another unrated to show for it! I suspect my teammates had their doubts about where I should be on the team board order, but in casual play at the school, none of the players below me could win many games from me. It seemed so easy for my friend Tim, he was 2-0 on 8th Board, having won both games in less than 7 moves! Must be nice! But he had no illusions about his opposition, because he almost never got a game from me any more.

In these early losses, I recall coming to some conclusions about tournament play, and my own ability to play it.

*I realized the mistakes were often in my head, the products of impatience (moving too fast), nerves or

adrenaline (a player must ride beyond the fight or flight reaction and think calmly, especially under pressure), or fatigue. I didn't believe in any of the games the opponents were overwhelming in knowledge or ability.

*I enjoyed chess because it was a game in which both sides started out equally. Anything that happened after that, your result could only be blamed on yourself.

*That I was improving. Even though I was still waiting to win a tournament game, I felt the players I played at the club who were far above me were becoming ever so imperceptably human. And that players I considered equals seemed to be becoming less so. I never actually could feel like I was improving, but I gauged it by the fact that others I played regularly seemed to be getting worse, and I felt that was not likely, so I concluded I was improving.

*I had learned that ratings were not absolute. In fact, other than as a rough batting average, they meant very little at our levels.

I had played in an officially rated tournament, overcome a challenge on a board above me, and increased my confidence against our school's best player. Things, at long last, were looking up.

At this time I was probably spending several hours a day playing chess, and looking at what few books I had. I had gone into my first battles and gotten my bloody noses.

Next time: My first tournament victory!

The winning move! It will be hard for black to stop the white king from marching inside. At long last, white has found a successful breakthrough, based on the king invading on the dark squares. The d5 pawn, stuck on a light square, will be the downfall of the black position.

(see diagram next column)

113... cxb5 114. Bxb5 Kd6 115. Kb4 Bf7 116. Ka5 Kc7 117. Bd3 Be6

It is important for white to ensure that black does not forget the pawn on f5, too.

118. Kb5 Kd6 119. Kb6 Bc8 120. Bb5 Be6 121. Kb7 Bf7 122. Kc8 Bh5 123. Kd8 Bd1 124. Bd3 Ke6 125. Kc7 Bb3 126. Ba6 Bc2 127. Kd8 Be4 128. g3 Bf3 129. Bc8+ Kf6 130. Kd7 Kg6 131. Kd6 Be4 132. Ba6 Bf3 133. Ke5 Kh5 134. Kxf5 Be4+ 135. Ke5 Kg4 136. Be2+ Kxg3 137. f5 Kf2 138. Bh5

{Black resigned thus allowing me to win the First MCA Fide. I think the right setup to stop the break would have been Black Bd7,c6,d5,f5,h6,Kb6. and play Be8,Bf7,Be6 for tempos.} **1-0**

THE NOTEBOOM ATTACK

P-Q4 for the Non-Boring Player, Continued

by Henry Getz

Alright, apparently people liked the last article I spat up so thought I'd give it another go. I was planning to do a Wayne Zimmerle opening tribute (he's not sick or retiring but just thought it would be a great article... those of you that know how hard Wayne works for downstate chess, his easygoing personality, and his "cutting edge" openings would understand), but I want some more time to dedicate to that so instead thought I would throw some more "queens pawn openings aren't boring" meat on the table.

There's nothing better for that than the Noteboom opening.

The Noteboom is a queens pawn accepted line. It's fundamental, and terribly tactical. GM Sherbakov describes it as not only the sharpest Slav line, but the sharpest line in all of chess, and one opening yet to be completely uncovered. In fact, the opening requires the knights to develop before the e pawn, and many GMs develop the e pawn before the knights with the sole purpose of avoiding the head splitting agony of a noteboom possibility. I've found almost unanimous victories with it and would highly recommend it to anybody who occasionally talks trash, doubts the talents of his fellow man, wants to prove it, and laughs in peoples faces when he does. Although the verdict remains out on the noteboom officially, I'd like to paraphrase Rudolf Spielman, who wrote an incredible book, "The Art of Sacrifice in Chess," -- "Even with a failing attack, at very least, your opponent must dance while you

throw hot lead at his feet."

There are few drawing lines here on out.

Noteboom Opening

1.d4 d5 2.c4 e6 3.Nf3 c6 4.Nc3 dxc4

This is the classical noteboom. The knights must come out before the epawn, allowing black time to play e6 and c6 before the capture.

5.a4

This will likely transpose with e3 lines as can be seen later. Other moves:

[5.Bg5 Be7!?

a) 5...Qc7?!? just to illustrate how delicate stealing a pawn can be, this innocent looking move can lead to lots of trouble, merely by losing a valuable tempo. 6.a4 Bb4 7.e4 b5 8.Be2 Nf6 9.Bxf6 gxf6 10.0-0 Bxc3 11.bxc3 0-0 12.Qc1 Nd7 13.Qh6 Kh8 14.e5 Rg8 15.exf6 Rg6 16.Qh5 Nxf6 17.Qe5 Qxe5 18.Nxe5 Rg7 19.Nxc6 bxa4 20.Bf3 Nd5 21.Bxd5 exd5 22.Rfe1 Bd7 23.Ne5 Bb5 24.f4 Re8 25.Kf2;

6.Bxe7 Nxe7 retaking with the knight allows black time since king safety is not an issue with castling imminent, the black squares are now a contest. 7.a4 (7.e4 b5 8.a4 Ba6 (8... Qb6 9.axb5 cxb5 10.b3) 9.Be2 0-0 10.0-0 b4 11.Na2 c5) 7...Nd5 8.e4 (8.a5 c5 9.e4 Nxc3 10.bxc3 Qc7 11.Qa4+ Bd7 12.Qxc4 0-0 13.Be2) 8...Nxc3 9.bxc3 b5;

5.e4 b5 6.e5 Bb7 7.Bg5

Now the important thing to remember is not to move Be7. White is trying to get to d6 with his knight and ruin black's day. Play should involve Qc7 and then Nd7 and Ne7 when the time is right. Black is a pawn up and doing very well. 7... Qc7!! 8.Ne4 (8.Be2 Nd7 9.0-0 Ne7 10.Nd2 Nd5 11.Qc1 Nxc3 12.bxc3 c5 13.a4 a6 14.axb5 axb5 15.Rxa8+ Bxa8) 8...Nd7 noteboompt

5...Bb4 6.e3

[6.e4?! Simply overextending white, does not help. b5 7.Bd2 Nf6!! (7... a5) 8.e5 Bxc3 9.bxc3 Ne4 10.Qb1 Qd5 11.Be2 Bb7 12.0-0]

6...b5 7.Bd2 a5 '!' ,Henry.

[7...Bb7?! a complicated blunder that even the GMs make. It leads to an inferior endgame after the queens come off the board. Play might follow... 8.axb5 Bxc3 9.Bxc3 cxb5 10.d5! f6 (10...Nf6?! 11.dxe6! Qxd1+™ (11...fxe6? 12.Qxd8+ Kxd8 13.Nd4) 12.Rxd1) 11.dxe6 Qxd1+ 12.Rxd1 Ne7 13.Nd4!! a6]

8.axb5 8...Bxc3 9.Bxc3 cxb5 10.b3 Bb7!!

Here the game becomes critical... there are two difficult lines to be analyzed, the d5 push and the classical bxc4 aiming for a pawn rush for a win for which side yet to be determined. Both make for incredible games.

11.d5

[11.bxc4
Diagram next page

The classical approach, which although recently discovered not as dreaded for white as previously thought, is still not something to be eager to jump into. Basic theory is black will neutralize the white central structure and push his pawns down white's throat til he chokes. Simple.

11... b4 12.Bb2 Nf6 13.Bd3

(13.Ne5!? 0-0 14.Bd3 Nbd7 15.0-0 Nxe5!! 16.dxe5 Nd7 17.Qc2 h6 18.Bd4 Qc7³)

13...Nbd7 14.0-0 0-0 15.Qc2 Qc7 16.c5

(16.e4 e5 17.dxe5 Ng4)

16...Bc6 17.e4 h6 18.Rfb1

(18.Nd2?! a4 19.Rfb1 Rfb8 20.Nc4 a3 21.Bc1 e5 22.d5)

18...a4 19.Bc1 Qb7!! 20.e5

back to the main line...

11...Nf6

[11...f6? this tried line fails miserably... see if you can figure out why before you continue...]

12.bxc4 b4 13.Bxb4!! (although fritz might disagree and suggest better moves this simplifies to the easiest win)]

12.bxc4 b4 13.Bxf6 Qxf6 14.Qa4+ Nd7 15.Nd4 e5 16.Nb3 Ke7 17.Nxa5?

This mistake ends white's chances. Look carefully and you'll see how black is developed, white isn't, he's in good position, and his king is SAFE! Black is in perfect structure for an endgame, and this greedy move (which only wins back the pawn temporarily at best) will simply crush him.

[Another try: 17.Be2 This is the more sane response. And here we see how white succumbs to simple pressures. Black is simply too strong.]

Rhc8 '!' 18.0-0 Nc5 19.Nxc5 Rxc5 20.Rad1 20...Kf8 21.f4 e4 22.Rd4 Re8 23.f5 Bc8 24.Rf4 Qd6 25.f6 g5 26.Rf2 Bd7 27.Qc2 Qe5 28.Bd1 Rb8 - Diagram)

Here's another example of the fragile position white is in. Instead of 17. Nxa5, grabbing the pawn, let's try: 17.Qb5

Here we see how solid black's defense actually is, and more importantly how quickly he can snap into an attack, when white prods him incorrectly. Ba6 18.Qxa5 (18.Qc6 Qxc6 19.dxc6) 18...Rhb8 19.d6+ Ke8! 20.Nc5 (20.Qd5 Bb7 21.Qd2 Rxa1+ 22.Nxa1 Bc6 23.Nb3 Ba4 24.Qa2 Bxb3 25.Qxb3 e4 26.Be2 Qc3+ 27.Qxc3 bxc3) 20...Nxc5 21.Qxc5 e4 22.Rd1 Qc3+ 23.Rd2 Bb5 24.Be2]

Returning now to the position after 17. Nxa5:

17...Qb6 18.Qb5

Practically forced... white will lose his pinned knight otherwise or fall to one of too many pressures.

[18.d6+ Ke6 19.Qb5; 18.Be2 Nc5 19.Qa2 Rhd8 20.0-0 Kf8 21.h3 Ra6 22.Qc2 Rxa5 23.Qxh7 Rxa1 24.Rxa1 Qh6]

18...Qxb5 19.cxb5 Bxd5 20.Rd1 Rxa5 21.Rxd5 Ra1+ 22.Rd1 Rha8 23.Be2 Rxd1+ 24.Bxd1 Ra5 25.0-0 Rxb5

It seems like white never had a free breath. Some investigation should be given to earlier center pushes in the classical 11. bxc4 variation, if white wants to improve.

WARREN JUNIOR CHESS SCHOLARS

by Andi Rosen

Top in the Nation

The Illinois Chess Association Warren Junior Scholar Program serves Illinois youth whose chess rating puts them in the top 35 in the nation for their age and/or gender. Players who achieve this elite status have the opportunity to receive financial subsidies for private chess instruction with masters and grandmasters, and to participate in small-group programming and tournaments organized by the Warren program. Warren Scholars in grades K-8 are also presented with a plaque at the state scholastic championships noting their achievement. The program was founded many years ago by former ICA president Helen Warren, with the goal of nurturing the highest-potential Illinois students so they can be competitive on a national and international stage.

Currently, 33 Illinois children are nationally ranked in about the top 35 or higher for their age group. This is a record number of players since the ICA took over the Warren program three years ago. The ICA believes that intensive mentoring at a young age will not only help our talented chess players reach even greater heights in chess, but that it will foster the type of critical thinking skills and perseverance that will propel these students to intellectually contribute to society in many ways as adults.

Thanks to our sponsors:

The Warren Program owes its existence to the generous donations of its sponsors. We gratefully acknowledge the contributions of the following businesses and individuals:

\$1,000: Chess Education Partners; Zack Fishman, President

\$1,000: Mr. William H. Brock, former ICA president

\$1,000: Mr. and Mrs. Dominic and Nada Salvino

\$250: Anonymous

\$100: Mayor Louis Sherman; Steger, Illinois

\$50: STATS, Inc.; Northbrook

\$50: Mr. Joe Delay

\$25: Checkmate Chess Supply

\$25: Mr. Richard Boyer

\$25: Mr. Anthony Jasaitis

\$25: Mr. Tim Just

\$25: Mrs. Joyce Lohrentz

\$25: Mr. and Mrs. Peter and Judi Spizzirri

Congratulations to the 2008 Warren Scholars:

Anshul Adve	Trevor Magness
Michael Auger	Bryce McClanahan
Kayin Barclay	Gavin McClanahan
Alex Bian	Daniel McNally
Jyotsna Bitra	Aakaash Meduri
Tony Cao	Ilan Meerovich
Kent Cen	Gopal Menon
Jason Chien	Chris Nienart
Jack Curcio	Conrad Oberhaus
Josh Dubin	William Radak
Sonam Ford	Eric Rosen
Ian Gilchrist	Ben Rothschild
Zachary Holecek	Gordon Ruan
Zach Kasiurak	Sam Schmakel

Denker Qualifier and the Warren Program:

For the last two years, the Warren Program has been run by the Illinois Chess Association. Andi Rosen has served as program director. In addition to providing subsidies to talented students for instruction, the program for the first time this year is also providing funding for the Illinois High School Denker Qualifier Tournament (see accompanying article). The program continues to seek donors and sponsorships in order to providing programming for the state's top-achieving players. If you are interested in donating or would like more information, please contact Andi at warrenprogram@ilchess.org.

Available for Community Events:

The program also aims to promote chess in the community. For the third year in a row, the Warren Chess Scholars will participate in the annual Taste of Chicago festival in Grant Park. On Saturday, June 28, from 3 p.m. to 6 p.m., the Warren Scholars will offer festival visitors simultaneous exhibitions, chess lessons, and the opportunity for informal play. We hope you can visit us there.

The Warren Scholars are also available to participate in other community events. They are a great attraction at neighborhood festivals, company picnics, business grand openings, or other special events. For information on how you can bring the Warren Scholars to your community event, send an email to warrenprogram@ilchess.org.

State High School Denker Qualifier

Twelve of the state's top high school players will vie for the chance to represent Illinois at the U.S. Denker High School Tournament of Champions this August in Dallas, Texas. The five-round qualifying tournament will be held Saturday and Sunday, March 29-30, at the Skokie Holiday Inn.

Grandmaster Pascal Charbonneau will be on hand all weekend to do game analysis with participants in between rounds. The tournament winner will receive a \$500 travel stipend from the ICA Warren Junior Program, which is sponsoring the event, as well as an additional \$100 from the U.S. Chess Federation. Chicago's Sevan Muradian, the 2007 USCF Chess Organizer of the Year, will direct the Illinois event.

Participants at the national event will compete for the top prize of a full four-year scholarship to the University of Texas Dallas, which boasts one of the country's top chess teams. The U.S. Chess Trust will also award scholarship money to the top five finishers at the national event: \$800 for first place, \$500 for second place, and \$300 each for third through fifth places. For more information about the local qualifier, contact warrenprogram@ilchess.org.

Speaking of Illinois Scholastic chess... here is a photo taken from the IHSA State Tournament, courtesy of Betsy Dynako. Caption: "The Playing Hall"

North American FIDE Invitational

GM and IM norm tournaments

<http://www.nachess.org/fide/>

***Do you want to gain your FIDE title?
Do you want to stay local within North America?
Do you have the norm hunt fever?***

Tentative Schedule for 2008

January 20-26 (IM Norm)	July 20-26 (IM Norm)
February 17-23 (IM Norm)	August 24-30 (IM Norm)
March 23-29 (IM Norm)	September 21-27 (IM Norm)
April 20-26 (IM Norm)	October 6-10 (GM Norm)
May 18-22 (GM Norm)	November 16-22 (IM Norm)
June 22-28 (IM Norm)	December 14-20 (IM Norm)

All events are 9R-RR with a time control of G/90 + 30/sec increment

Conditions offered for GM's and IM's. Contact organizer for details.

Why are Round Robins better than Swisses?

- Norm opportunity is guaranteed - no guessing
- Know your pairings in advance
- Prepare for your opponents
- Less distractions during the event
- Focus on the norm hunt!

*These events are organized by
the 2007 USCF Organizer of the Year:
Sevan A. Muradian*

Entry Fee Schedule

FIDE 2500+ - Free
FIDE U2500 - \$99 USD
FIDE U2400 - \$ 149 USD
FIDE U2300 - \$ 199 USD
FIDE U2200 - \$ 299 USD
FIDE U2100 - \$ 499 USD

Foreign Federation—50% off

Special EF - \$99 if you scored a norm in a
previous NA FIDE Invitational.

Unrateds by special consideration only.

Where do the Entry Fee's go?

To pay appearance fees for GM's / IM's,
site costs, and any prize funds.

The organizer keeps nothing!

For more information on these events visit:

Sponsorship Opportunities Available

Keating, Robert -
Karagianis, Pete
[C45]
 Hawkeye Mind Challenge,
 Iowa city
 [Karagianis, Pete]

a bit surprised after the game when Robert indicated he had not previously seen the plan of opening the center so early. I believe cd4 and ed4 are somewhat standard ideas.

How big of a difference does psychology indeed play in chess? In what various ways can psychological factors affect a game? The following match I feel was interesting primarily for reasons unrelated to what was happening on the board. There are several key moments throughout the game where it is not objectivity- nor chess skill or understanding- but psychology that dictates both the play and outcome of the position.

1.e4 e5 2.Nf3 Nc6 3.Bb5 a6 4.Ba4 Nf6

My opponent is Dr. Robert Keating. He is a strong correspondence player- and I believe a former US Correspondence champion of some sort (though I do not know specifically which tournament he won). I entered this game with the pre-conception that a strong correspondence player would by rule be very strong in the opening, and decided therefore to play a side-line of the standard Ruy Lopez, 12. ...Rd8- a variation that I use rarely in serious play.

5.0-0 Be7 6.Re1 b5 7.Bb3 d6 8.c3 0-0 9.h3 Na5 10.Bc2 c5 11.d4 Qc7 12.Nbd2 Rd8 13.Nf1 cxd4

All theory to this point. I was

14.cxd4 exd4 15.Nxd4

One of white's ideas is a temporary pawn sac with 15. b3 instead, but i don't think such a move would be any better than the straight forward Nxd4.

15...d5

The whole point.

16.e5 Ne4

Here my opponent thought for a very long time, and I began to suspect that we were out of his "book". Even the move 16. e5 he had played relatively quickly. The move he chooses is not accurate, but it is hard to meet nonetheless. Black's knight is in dangerous territory, though it cannot be captured immediately for obvious reasons involving the ensuing pin on the d-file.

17.Qd3 ?!

The more critical continuation is: [17.f3 Despite whatever theoretical discussion one wishes to have, the basic principle behind this line is: can black prove that 13. Nf1 was too passive of a move? 12. ...Rd8 followed by the opening of the center is an extremely active plan, and white still has some developing

left to do. Still, black's play hinges on the knight being able to land on e4 safely... and stay there, at least for a couple moves. 17...Bc5 !! I think I originally saw this in a Grischuk game, though I can't be certain. The idea is that 18. fxe4 is met by either Qxe5 or the simple dxe4.]

17...Bc5 !

This move is strong anyway. It is black's first objective to prevent white playing f3... especially since now the knight on e4 cannot be taken. One threat is ...Bxd4 followed by ...Qxc2. Black is still trying to use activity as his main weapon.

18.Be3

It's hard to suggest a better move, but this one isn't exactly great. I felt my momentum growing, as I was playing aggressive moves

and white was now relegated to defense. [18.Rxe4 After the game my opponent mentioned that he had initially planned this move, only to realize his queen would be effectively trapped. Of course, black has to be careful and examine all variations, but it seems he comes out in the clear: 18...dxe4 19.Qxe4 g6 (19...Rxd4 may be possible, but why tempt fate when there are easy moves... 20.Qxh7+ Kf8 21.Qh8+ Ke7 22.Bg5+ Kd7) 20.Qxa8 and now both ...Bb7 and ...Bxd4!! are strong. I think I would prefer Bxd4 here, which was also my preference in analysis during the game. 20...Bxd4 and now both the bishop on c2 and the queen are in trouble... (20...Bb7 21.Qxd8+ Qxd8) 21.Qe4 Bf5]

18...Nc4

[18...Qxe5 was also worth considering, with the idea that... 19.f3 Nf6 seems ok for black, but white probably has something here. Why play risky moves when black can secure a simple advantage?]

19.f4 !

Probably the best move. White can ill-afford to give up the e5 pawn.

19...Nxb2 20.Qe2 Nc4

The knight grabs a pawn and returns to its strong post.

21.Bxe4 dxe4

Oddly enough, it is white (down a pawn) who chooses to simplify. At this juncture I felt I would win "by default" with an extra pawn and the two bishops in an endgame, but it is not so easy. Here again, psychology plays its part- do I find "best" moves the rest of the way?

**22.Nb3 Nxe3 23.Nxe3 Bb6
24.Rac1 Qa7 25.Kh2 Rd3**

26.Ng4 Bf5

Now that g4 isn't possible, my bishop can stay on this diagonal, which also prevents white from playing f5.

**27.Rf1 Rad8 28.Nf2 Bxf2
29.Rxf2 e3 30.Rff1**

The time control was an odd 30/90 SD/1. Here I blundered in time pressure, not wanting to fall victim to a back rank tactic. 30. ...Be4!, which I saw in the game, is best.

30...h6? 31.Qf3 !

... and now black's task is harder.

31...Be6

Probably best- with a threat to trade off the knight (which has suddenly gained great strength--- via c5 or via Na5-c6) or to go to d5.

32.Nc5 Bd5 33.Qg3 Rd2 34.Rg1 Qa8 !

This battery is the main idea behind 31. ...Be6... a move which I spent a good deal of time on.

35.Qxe3 !

... what else?

35...Bxg2 36.Kg3 Qd5

[36...Qc6 Surprisingly, the white king has a safe place on g3... but Qc6! may have cracked the defense. 37.f5 R8d4 with ...Bh1 in mind is a basic idea, though black should be more careful in light of 38. e6.]

37.a3 !

White wisely does not concede even a pawn.

37...Qa2 38.Rc3 Re2 39.Qc1 Ba8 40.Kh4 Rg2

With the king on h4, I overestimate my own position! Trades only benefit the defender. Strange how, when your opponent's king becomes "airy", one often feels he can play whatever he desires and win.

41.Rxg2 Qxg2 42.Qe3 Qg6 43.e6 Qf6+ 44.Kg3 Re8

White's king has arrived at safety, but the fight is not yet over. Somehow, it is white who now has all the activity, despite his king's open position. Black now must work extra hard to prove the worth of his pawn advantage, which I was able to in mutual time pressure. I felt that to finish this game I almost had to rely on the clock, as white's position is dicier to handle under the distraction of time. A good lesson- do not fall into the trap of getting "too comfortable" simply because your opponent's king has exited its pawn shield.

A LITTLE RANT ON SPORTSMANSHIP

by Vince Hart

A couple years back, Prospect had a home match scheduled against conference powerhouse Barrington. As Barrington is the farthest school in the conference, they were a bit late and a couple of our players asked whether we could start their clocks. I responded "Of course not! Why would you even want to?" As it happened, Prospect pulled off an upset that year and the players were glad they had waited. The last thing you want to do is give your opponent an excuse for losing. The next to last thing you want to do is make an excuse for your own loss.

The vast majority of high school coaches I encounter demonstrate exemplary sportsmanship, but some of them are not experienced tournament players themselves. As a result, when one of the whiners makes a trivial complaint, it may gain more traction than it deserves because the rest of the coaches are so committed to being fair. For the benefit of those coaches who may not recognize whining for what it is, I would like to respond to some of the complaints that might have been overheard at the recent IHSA Team Championship.

Complaint No. 1. The pairings were unfair.

Response No. 1. Were not!

The pairings were imperfect because the only perfect pairing system is a double round robin where every player plays every other player once with white and once with black. Unfortunately, this is hard to manage with 120 teams. Any other pairing system can only hope to approximate the results of the double round robin. They will all necessar-

ily entail a certain degree of randomness and arbitrariness.

Complaint No. 2. We were fleeced by the tiebreak.

Response No. 2. Nuh-uh!

As with pairing systems, any tiebreak system is going to be somewhat random or arbitrary in some cases. Tiebreaks only apply when no single team or player, as the case may be, demonstrates a clear superiority over the board. If one team finished behind another team on tiebreaks in a seven round tournament, the odds are slim to none that it can convincingly demonstrate that it should have come out ahead. In shorter tournaments, however, the randomness of tiebreaks, as well as pairings, tends to be more pronounced.

The important thing to remember is that tiebreak rules and pairing rules are only unfair if they are applied inconsistently or if they are changed in midstream. That they may occasionally produce an imperfect result is simply a function of the fact that we live in an imperfect world. We can always fashion rules that would have produced what we consider to be a more just result in the last tournament, but we can never be sure that those rules will produce what we consider to be the more just result in the next one.

Complaint No. 3. We were robbed by a steward's bad ruling.

Response No. 3. Tough toenails!

If a basketball game is decided by a last second whistle, that means that neither team had convincingly

demonstrate their superiority in the rest of the game. Referees are part of the game and there were probably calls earlier in the game that could have gone the other way. At a chess tournament, the stewards are part of the game and the stewards at the IHSA were damn good. When you enter a tournament, you accept the risk of a bad ruling and that risk was low at the IHSA.

Complaint No. 4. We were robbed because the other guys had access to our games and could prepare for us and we did not have access to theirs.

Response No. 4. No, you weren't.

When masters play in tournaments where they know their pairings in advance, they can benefit from preparing for specific opponents. For a high school player preparing for the IHSA Championship, any time spent trying to identify weaknesses to exploit in potential opponents' games is time not being spent trying to identify weaknesses to correct in one's own games. While accomplishing the former is not impossible, the odds of accomplishing the latter are monumentally greater. Any coach should be thrilled to have other teams devoting their preparation time to scouting.

Let's face it. Teams like Lincolnshire do not win championships as a result of favorable pairing, tie breaks, stewards' rulings or scouting. They win by outplaying their opponents in round after round.

As I noted above, many high school coaches are not experienced players so there may not be a lot that they can teach their students about the game itself. However, they can always teach their players about character and sportsmanship by accepting defeat with grace and class. I am happy to report that the vast

majority of IHSA coaches do exactly that. To those few who do not (and unfortunately they probably have no idea who they are), I would respectfully advise them to grow up.

AND NOW AN ANNOTATED
GAME FROM THE IHSA STATE CHAMPIONSHIPS!

In the recent, IHSA Team Championships in Peoria, my Prospect Knights duplicated last year's 4-3 finish while moving up from 37th to 34th place. Although it may not sound like a huge improvement, it really was. The team averaged fifty-one points in its four wins and twenty-nine points in its three losses vs. thirty-nine and sixteen last year. The highlight of the tournament was 1400 rated Peter Dimopoulos' upset of Lincoln Way Central's 1900 rated Alex Strunk on first board in the third round.

Dimopoulos,P - Strunk,A

1.d4 Nf6 2.c4 Nc6

This exotic defense is known as the Black Knights' Tango and it is a relatively recent invention. Not being a 1.d4 player, I have never faced it but I do not think that its reputation is entirely solid. Personally, I am always more willing to adopt an offbeat opening as White than as Black because the worst that happens is that I lose the advantage of the first move. The fact that Peter was able to seize the initiative here by playing mostly on instinct reinforces my belief in that approach.

3.Nf3 e6 4.Nc3 Bb4 5.Bg5

Now we get something that looks like the Leningrad variation of the Nimzo-Indian defense with the important difference that Black is unable to attack the White center with ...c5.

**5...h6 6.Bh4!? g5 7.Bg3 Ne4
8.Qc2 Nxg3 9.hxg3 g4**

As I said, I know nothing about the Black Knights' Tango, but this seems to be the kind of thing Black is hoping for. It just doesn't work out that well for him.

10.Ne5!?

[10.d5 would preserve the d-pawn but this seems to be fine for White given Black's lack of development and weak pawns.]

**10...Nxd4 11.Qd2 Nf5 12.e4
Nd6**

Seven of Black's first twelve moves have been knight moves, which I have to think is asking for trouble.

13.Bd3 f5?!

Black wants to avoid losing both the g and h-pawns but this leaves his king very drafty.

[13...Rg8]

**14.Rxh6 Rg8 15.0-0-0 Nxe4
16.Bxe4 fxe4?**

[16...Be7 threatening 17...Bg5 is more testing, but White is still in control.]

17.Rh7?!

[Peter misses the spectacular 17.Rxe6+!! but he would have needed to invest a fair amount of calculation time to work it out.

(Position before 17. Rh7)

In a sixty minute game it hard to know when such an investment is warranted and it is sometimes more practical to make a solid move that does not require too much calculation. 17...Qe7 is the only way for Black to avoid a quick mate. (17...Be7 18.£Q4 Rg7 19.Rh1 dxe6 20.Rh8+ Rg8 21.Rxg8+; 17...Kf8 18.Qf4+ Qf6 19.Qxf6#; 17...dxe6 18.Qxd8#) 18.Rxe7+ Bxe7]

17...d6 18.Qf4 Qg5 19.Qxg5?!

Gives Black a chance to get off the hook, but Alex was already well behind on the clock.

[19.Nxe4! was stronger.]

19...Qxg5 20.Nf7 Rg6?!

[20...Rc5 would have kept the game close, but Black's intuition tells him not to leave his king all alone and time pressure deters him from looking for counter-intuitive candidate moves.]

21.Nxe4 b6?! 22.Nh8!!

This is the most esthetically pleasing move I have seen in a long time! Knights often capture in the corner after a fork, but I cannot remember the last time I saw a knight force the win of material by moving into a corner without capturing.

22...Bb7 23.Nxg6 Bxe4 24.Rh8+!?

White cannot resist the opportunity to trade off the Black rook, but it is so passive that White would have been better off letting him keep it. As NM Dan Heisman advises his students: "When you see a good move, look for a better one."

[24.Re7+ Kd8 25.Rxe6 is stronger]

24...Kf7 25.Rxa8 Bxa8 26.Nf4 Bc5 27.Rh1 Bxf2 28.Rh7+ Kf6 29.Rxc7 Be3+

[29...Bxg3?? 30.Nh5+]

30.Kd1 a5 31.Rd7 Bxf4!?

In theory, Black should not be trading pieces when behind on material, particularly when it relieves White of his doubled pawns. On the other hand, Black was getting low on time and knights do those nasty forky things. In my experience, knights often become as valuable as rooks when there is only a minute or two

on the clocks.

32.gxf4 d5 33.cxd5 bxd5 34.g3 Bxa2 35.Rb7 Bb3+ 36.Kd2 a4 37.Rxb6 Kf5 38.Ke3

It took Pete a little while to realize that the winning plan is to trade his rook for the bishop and a-pawn.

38...Bd1 39.Rb5+ Kf6 40.Kd4 Bc2 41.Kc5 Kf5 42.Kd6+ Kf6 43.Rh5 Bb3 44.Kc5

Now he sees it.

44...Bd1 45.Kb4 Bb3 46.Ra5 Bd5 47.Rxa4 Kf5 48.Ra5?!

High schoolers tend not to reach all that many endgames and at sixty minute time controls, they often cannot devote the attention to them they deserve when they do. Young players also have a tendency to favor attacking their opponent's king when confining it would produce happier results. After 48.Kc5, the Black king would never have a chance to get at the White g-pawn and White could simply advance the b-pawn until Black was forced to give up the bishop to stop it from queening. Interestingly, Fritz considers Peter's move to be every bit as winning as my suggestion, but few players have Fritz's nerves of steel.

48...Ke4 49.Kc5 Kf3 50.Ra3+ Kg2 51.b4 Bf3 52.Kd6 Kxg3

53.ke5 Kf2 54.kxe6 g3 55.f5 g2 56.Ra1 Be2 57.f6 Bf1

58.Ra2+?!

[58.f7 is a better practical choice. After 58...g1Q 59.f8Q+ Ke2 60.Qxf1+ Qxf1 61.Rxf1 Kxf1, the b-pawn advances unhindered while Peter's move may subject him to a series of queen checks. Once again, Fritz considers both moves equally strong, but Fritz doesn't sweat.

58...Be2 59.f7 g1Q 60.f8Q+ Ke3??

[Black only had fourteen seconds left on his clock. After 60...Ke1 61.Ra1+ Bd1 White is still winning, but he has no checks due to his b-pawn, which means that the Black queen is going to be able to chase the White king around for awhile with the possibility that White might overlook a nasty fork somewhere.]

61.Qc5+! 1-0.

This was Peter's best game at Prospect.

Points to remember:

The virtue of offbeat openings is that your opponent may not know the variations. The problem with offbeat openings is that your opponent may not know the variations and you both wind up on unfamiliar ground.

Confining your opponent's king is frequently, if not usually, much stronger than attacking it. Rooks are particularly good at this job in the endings.

Games from the **ICCA Individual**
